(2) Every person that builds a new single-family detached residence for sale, whether or not the residence has been prewired for a photovoltaic solar generation system, shall provide to every buyer under contract a list of businesses in the area that offer residential solar installation services so that the buyer ~~if he or she so desires,~~ can obtain expert help in assessing whether the residence is a good candidate for solar installation and how much of a cost savings a residential photovoltaic solar generation system could provide. ~~The list of businesses shall be derived from a master list of Colorado solar installers maintained by the Colorado solar energy industries association, or a successor organization.~~

~~(3) Repealed.~~

~~(4) (3) Providing the master list of solar installers prepared by the Colorado solar energy industries association~~ SOLAR AND STORAGE ASSOCIATION, or a successor organization, to a buyer under contract ~~shall~~ DOES not constitute an endorsement of any installer or contractor listed. A person that builds a new single-family detached residence ~~shall~~ IS not be liable for any advice, labor, or materials provided to the buyer by a third-party solar installer.

~~(5) Repealed.~~

~~(6) (4) Nothing in this section shall preclude~~ PRECLUDES a person that builds a new single-family detached residence from:

~~(HH)~~ (II) If landscaping is financed, installed, or sold as upgrades through the home builder and will be maintained by the home owner, the home builder shall offer a landscape design that follows the landscape practices specified in this ~~subparagraph~~ ~~(HH)~~ SUBSECTION (1)(a)(II) to ensure both the professional design and installation of such landscaping and that water conservation will be accomplished. These best management practices are contained in the document titled "Green Industry Best Management Practices (BMPs) for the Conservation and Protection of Water Resources in Colorado: Moving Toward Sustainability", 3rd release, and appendix, released in May 2008, or this document's successors due to future inclusion of improved landscaping practices, water conservation advancements, and new irrigation technology. The best management practices specified in this ~~subparagraph~~ ~~(HH)~~ SUBSECTION (1)(a)(II), through utilization of the proper landscape design, installation, and irrigation technology, accomplish substantial water savings compared to landscape designs, installation, and irrigation system utilization where these practices are not adhered to. The following best management practices and water budget calculator form the basis for the design and installation for the front yard landscaping option if selected by the homeowner as an upgrade:

(A) Xeriscape: To include the seven principles of xeriscape that provide a comprehensive approach for conserving water;

(B) Water budgeting: To include either a water allotment by the water utility for the property, if offered by the water utility, or a landscape water budget based on plant water requirements;

(C) Landscape design: To include a plan and design for the landscape to comprehensively conserve water and protect water quality;

(E) Soil amendment and ground preparation: To include an evaluation of the soil and improve it, if necessary, to address water retention, permeability, water infiltration, aeration, and structure;

(F) Tree placement and tree planting: To include proper soil and space for root growth and to include proper planting of trees, shrubs, and other woody plants to promote long-term health of these plants;

(G) Irrigation design and installation: To include design of the irrigation system for the efficient and uniform distribution of water to plant material and the development of an irrigation schedule;

(H) Irrigation technology and scheduling: To include water conserving devices that stop water application during rain, high wind, and other weather events and incorporate evapotranspiration conditions. Irrigation scheduling should address frequency and duration of water application in the most efficient manner. ~~and~~

(I) Mulching: To include the use of organic mulches to reduce water loss through evaporation, reduce soil loss, and suppress weeds.

~~(IV)~~ (III) Installation of a pressure-reducing valve that limits static service pressure in the residence to a maximum of sixty pounds per square inch. Piping for home fire sprinkler systems ~~shall~~ MUST comply with state and local codes and regulations but are otherwise excluded from this subparagraph ~~(IV)~~ SUBSECTION (1)(a)(III).

(b) The offer required by ~~paragraph (a) of this subsection (1)~~ SUBSECTION (1)(a) OF THIS SECTION shall be made in accordance with the builder's construction schedule for the residence. In the case of prefabricated or manufactured homes, "construction schedule" includes the schedule for completion of prefabricated walls or other subassemblies.

(2) Nothing in this section precludes a person that builds a new single-family detached residence from:

(b) Selecting the contractors that will complete the installation of the selected options; or

(c) Stipulating in the purchase agreement or sales contract that water-efficient fixtures and appliances are based on technology available at the time of installation, such upgrades may not support all water-efficient fixtures or appliances installed at a future date, and the person that builds a new single-family detached residence is not liable for any additional upgrades, retrofits, or other alterations to the residence that may be necessary to accommodate water-efficient fixtures or appliances installed at a future date.

(3) This section does not apply to unoccupied homes serving as sales inventory or model homes.
