cable television, telecommunications, or advanced service to subscribers unless the local government obtains voter approval for the local government's provision of such services. The bill:

- Replaces the term "advanced service" with "broadband internet service", which, as currently defined, does not reference the speed at which internet services are provided;
- Eliminates the requirement that a local government hold an election before providing or before operating a facility to provide cable television, telecommunications, or broadband internet services to subscribers;
- Eliminates the requirement that a local government hold an election to enter into a private partnership to allow a private provider to use local government facilities in connection with the private provider offering cable television service, telecommunications service, broadband internet service, or middle mile infrastructure.
- Specifies that a local government may provide middle mile infrastructure, which is broadband infrastructure that does not connect directly to an end-user location; and
- Modifies the definition of "broadband internet service" as currently defined in the law concerning intrastate telecommunications services.
